GET SKILLS TO FULFILL EVERY ROLE:

VFX production is basically whatever involves the use of computer-generated imagery (CGI) and other digital techniques to create and manipulate visual elements in films, television shows, commercials, video games, and other media.

VFX can be used to add special effects, such as explosions, fire, or water, or to create scenes that would be difficult to create in real life (large crowds or landscapes). You can also use visual effects techniques to create entire digital worlds and characters.

HOW VFX PRO WORKING IN FILM INDUSTRY ?
